ANTENNA CONNECTION

Antenna connections

■ AM (MW, LW) loop antenna

Install the AM (MW, LW) loop antenna on the supplied loop antenna stand and place it on a shelf, etc., or install it on the rack or wall with screws.

Rotate the AM (MW, LW) loop antenna to the right or left for best reception.

Keep the speaker leads and AC cords away from the AM loop antenna.

■ FM outdoor antenna

It is recommended to install an exclusive FM outdoor antenna to capture FM broadcasts with high sound quality.

Use a coaxial cable for the connection between the outdoor antenna and FM ANTENNA terminal on the rear panel. For the connection between the coaxial cable and FM ANTENNA terminal, please refer to the illustration above.

■ FM indoor antenna

In areas where FM waves are strong, FM broadcasts can be received by connecting the supplied T-shaped antenna as shown in the illustration above. However, as FM waves are susceptible to external radio interference causing distortion, it is recommended to use an exclusive FM outdoor antenna.

Note:

Do not place the AM (MW, LW) loop antenna on the unit. As this unit employs a computing device, placing the AM (MW, LW) loop antenna on the unit may result in noise generation. Place the AM (MW, LW) loop antenna away from the unit.

■ AM (MW, LW) outdoor antenna

In steel buildings or at a great distance from the transmitter, it may be necessary to install an outside longwire antenna. The end of this wire should be stripped of insulation and connected to the AM terminal. At this time, keep the loop antenna connected.

- To minimize auto-ignition noise, locate the antenna as far from heavy traffic as possible.
- Keep the feeder or coaxial cable as short as possible. Do not bundle or roll up excess cable.
- The antenna should be at least two meters (6.6 feet) from reinforced concrete walls, or metal structures.

FM outdoor antenna setting

Ref. No.	Components	Use/Function	Operation/Condition/Compatibility
IC1	CXP50112-010Q	4-bit microprocessor	Controller for PLL and display, etc.
Q1	2SC1740S	FIP Driver	FIP Indication (STEREO, TUNED, ch etc.) JC501/2SC945(A)
Q2	2SC1740S	FIP Driver	FIP Indication (FM, AM, etc.) JC501/2SC945(A)
Q3	2SA733(A)	Tr. SW	CHANNEL SPACE select 2SA933S
Q4	2SA733(A)	Constant voltage	For +5 V JA101/2SA933S
Q5	2SC1740S	Microprocessor Reset	Suplies reset pulse to microprocessor JC501/2SC945(A)

CIRCUIT DESCRIPTION

OPERATION SPECIFICATION

Functions

(1) Tuner section

a) Auto tuning

When the "AUTO" display is lighting, the tuning operation starts with the UP or DOWN key pressed. This operation continues in the direction of increasing or decreasing frequency at a rate of approx. 125 msec/step until the SD terminal becomes "L" (in which "TUNED" lights). When an input is obtained, the operation is stopped, after which, 0.5 sec later, muting is turned OFF.

b) Manual tuning

When the "AUTO" display is off, when the UP or DOWN key is pressed, the tuning operation goes in the direction of increasing or decreasing frequency at a rate of one step per key pressure.

When the UP or DOWN key is pressed continuously for more than 0.5 sec, the tuning operation continues in the direction of increasing or decreasing direction at a rate of 125 msec/step irrespective of the SD terminal level until the key is released from the finger pressure.

c) Direct tuning

The frequency whose data has been directly input from numeral keys is received. About how to input the frequency data, press the DIRECT key, then input the frequency value from numeral keys.

When the input frequency is within the specified band, this frequency is received soon after the input of its final digit, While when it is without the specified band, an error display appears for 5 seconds, after that the original display is restored.

d) Preset memory

For each band, 10 stations can be preset. Their station names, each consisting of up to 4 characters, can all be memorized at the same time.

Only the FM mode permits memory of 10 more stations. In this case, however, their station names cannot be input.

e) Preset scan

This function is to receive the preset stations successively. With a tuning signal, muting is turned OFF for 5 seconds, while with no tuning signal, the tuning operation shifts to the next station after 1 second.

f) Station name display

For a preset memory, up to 4 characters can be input for a station name. When the wanted one is called from the preset memory, that station name is displayed. Inputtable characters are alphanumerics A to Z and 0 to 9, and 6 special characters including "—" (blank). In addition, FM2 does not permit input.

(2) Timer section

a) Day timer

A timer function with the unit count of 7.8125 msec is provided. The time value is displayed in the 24-hour mode without flickering of the colon ":" after which the second data is displayed.

At first, when AC is applied, the display is initialized to "0:00".

When the power fails, all digits inclusive of the colon flicker to warn for readjustment.

b) Calendar

An auto calendar function of from January 1, 1900 to December 31, 2099 is provided. With year, month and day data is input, day-of-week setting is automatically made. When initialized, January 1 (Sunday)/1989 is engaged.

c) Calendar check

When year, month and day data is input, it is possible to know what day of the week that day is.

The inputtable range of data is the same as that for the calendar function.

d) Programmable timer

Six timer systems are provided to set the day of week, ON time, OFF time, band and preset channel, independently. As to the day of week, selection is possible from 10 patterns such as each day of week of Sunday to Saturday, every day, Monday to Saturday, and Monday to Friday.

e) Sleep timer

The sleep timer is an auto OFF timer of max. 90 minutes, which is capable of setting in units of 10 minutes. During the sleep timer operation, the "SLEEP" display is lighting. This timer is given priority over the programmable timer. The sleep timer is operable even when the day timer is not set.

T-93/93L

CIRCUIT DESCRIPTION

IC1: CXP50112-010Q (X14-)

4-bit MICROPROCESSOR

Pin Connections (Top View)

Note: The NC pins, pins 33 and 73, should be set to VDD.

CIRCUIT DESCRIPTION

Pin Functions:

Pin No.	Pin name	I/O	Name	Operation description	
1	S4/PG0	O	KS4	Key scan output	H: ON L: OFF

The output data to PLL refers to the stereo mode for FM/AM, to either the stereo or the monaural mode for TV, and to the monaural mode for LW.

CIRCUIT DESCRIPTION

Test mode**Tuner mode****(1) Method of setting**

While pressing the DOWN key, turn AC ON.

(2) Contents

Power ON

FLL all lit

Test frequency setting (Table below)

(3) Method of canceling

Clearing the FLL all lit state is performed by numeral key, band key, UP/DOWN key or POWER key.

Initial status setting (reset)**(1) Method**

While pressing the ENTER key, turn AC ON.

(2) Contents

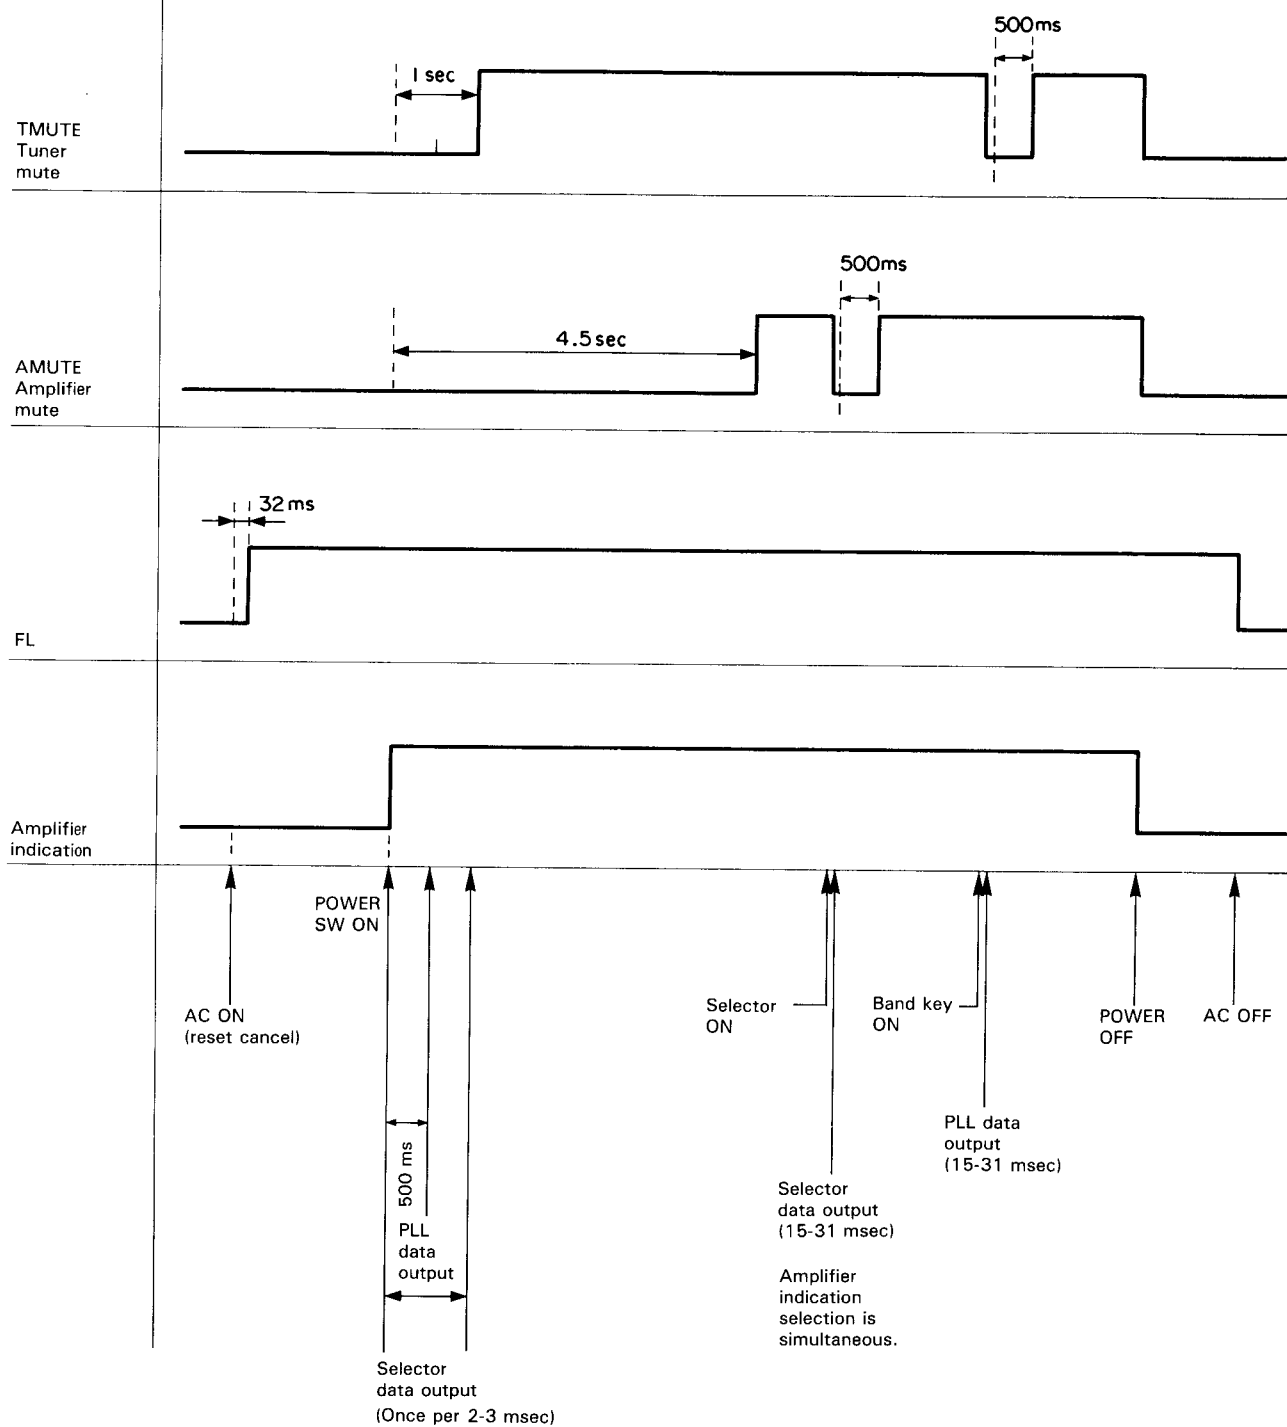

The all memory is cleared and the initial status is fully re-stored. At this time, however, test frequency is newly memorized in the preset memory. (This is the same as when backup data is not good.)

(X) TYPE
(M) TYPE

DC voltages are as measured with a high-impedance voltmeter during reception of the FM broadcast signal (with a signal strength of 60 dB at the ANT terminal). Values may vary slightly due to variations between individual instruments or/and units. Values in parentheses are as measured during reception of the AM broadcast signal (with a signal strength of 60 dB at the ANT terminal).

Les tensions c.c. doivent être mesurées avec un voltmètre à haute impédance pendant la réception d'un signal de programme FM (avec une force de signal de 60 dB à la borne ANT). Les valeurs peuvent différer légèrement du fait des variations inhérentes aux appareils et aux instruments de mesure individuels. Les valeurs entre parenthèses doivent être mesurées pendant la réception d'un signal de programme AM avec une force de signal de 60 dB à la borne ANT).

Die angegebenen Gleichspannungswerte wurden mit einem hochohmigen Spannungsmesser bei Empfang eines UKW-Signals (mit einer Feldstärke von 60 dB am Antennenanschluß) gemessen. Dabei schwanken die Meßwerte aufgrund von Unterschieden zwischen einzelnen Instrumenten oder Geräten u.U. geringfügig. Die eingeklammerten Gleichspannungswerte wurden bei Empfang eines MW-Signals (mit einer Feldstärke von 60 dB am Antennenanschluß) gemessen.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

T-93/93L

T-93/93L

SPECIFICATIONS

T-93L

FM tuner section

Tuning frequency range	87.5 MHz ~ 108 MHz
Usable sensitivity (DIN at 75 Ω)	
MONO	0.8 μ V
STEREO	28.1 μ V
Total harmonic distortion (DIN at 1 kHz, 65.2 dBf input)	
MONO	0.2%
STEREO	0.5%
Signal to noise ratio (DIN weighted at 1 kHz, 65.2 dBf input)	
MONO	67 dB
STEREO	63 dB
Stereo separation (DIN at 1 kHz)	46 dB
Alternate channel selectivity (DIN \pm 300 kHz)	67 dB
Frequency response (30 Hz ~ 15 kHz)	+0.5 dB, -2.5 dB
Output level/Impedance (at 75 kHz dev.)	0.6 V/3.3 k Ω

MW Tuner Section

Tuning frequency range	531 kHz ~ 1,602 kHz
Usable sensitivity	17 μ V/800 μ V/m
Signal to noise ratio (at 30% mod. 1 mV input)	49 dB

LW Tuner section

Tuning frequency range	153 kHz ~ 281 kHz
Usable sensitivity	20 μ V/1000 μ V/m
Signal to noise ratio (at 30% mod. 1 mV input)	47 dB

General

Power consumption	9 W
Dimension	W: 360 mm H: 70 mm D: 354 mm
Weight	2.7 kg

T-93

FM tuner section

Tuning frequency range	87.5 MHz ~ 108 MHz
Usable sensitivity (IHF at 75 Ω)	0.95 μ V/10.8 dBf
Total harmonic distortion (at 1 kHz, 65 dBf input)	
MONO	0.4%
STEREO	0.45%
Signal to noise ratio (at 1 kHz, 65 dBf input)	
MONO	78 dB
STEREO	71 dB
Stereo separation (at 1 kHz)	40 dB
Alternate channel selectivity (\pm 400 kHz)	56 dB
Frequency response (30 Hz ~ 15 kHz)	+0.5 dB, -2.5 dB
Output level/Impedance (at 75 kHz dev.)	0.6 V/3.3 k Ω

AM Tuner Section

Tuning frequency range	
531 kHz ~ 1,602 kHz	9 kHz step
530 kHz ~ 1,610 kHz	10 kHz step
Usable sensitivity	17 μ V/800 μ V/m
Signal to noise ratio (at 30% mod. 1 mV input)	49 dB

General

Power consumption	9 W
Dimension	W: 360 mm H: 70 mm D: 354 mm
Weight	2.7 kg

KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.

KENWOOD poursuit une politique de progrès constants en ce qui concerne le développement. Pour cette raison, les spécifications sont sujettes à modifications sans préavis.

KENWOOD strebt ständige, Verbesserungen in der Entwicklung an. Daher bleiben Änderungen der technischen Daten jederzeit vorbehalten.
